SNOW STUDS QUEST

Year 1: Foundations of Plastics Fabrication

Subject 3. Types of Plastics and Their Properties

1. What are thermoplastics known for?

- a) High flexibility
- b) Low strength
- c) Heat resistance
- d) Rigid structure

Correct Answer: a) High flexibility

Explanation: Thermoplastics are characterized by their ability to be reshaped upon heating. This property allows them to be easily molded or extruded into various forms, making them highly flexible. They can also return to their original state after cooling, making them suitable for applications requiring flexibility, such as in packaging and consumer products.

2. Which property is best for high-temperature applications?

- a) Low strength
- b) Lightweight
- c) Flexibility
- d) Heat resistance

Correct Answer: d) Heat resistance

Explanation: Heat resistance refers to a material's ability to withstand high temperatures without significant deformation or degradation. This property is crucial for applications involving exposure to heat, such as automotive parts and electrical components. Materials with high heat resistance, like certain thermosetting plastics, maintain their integrity under thermal stress.

3. What is a key feature of thermosetting plastics?

- a) Permanent shape
- b) Flexible
- c) Reusable
- d) Low cost

Correct Answer: a) Permanent shape

Explanation: Thermosetting plastics are known for their ability to maintain a permanent shape after being cured or set. Once they have undergone the curing process, they cannot be reshaped or remolded, which makes them ideal for applications requiring durability and structural integrity, such as in electrical insulators and automotive parts.

4. Which plastic type is generally stronger?

- a) Thermoplastics
- b) Biodegradable plastics
- c) Thermosetting plastics
- d) Composite plastics

Correct Answer: c) Thermosetting plastics

Explanation: Thermosetting plastics generally exhibit greater strength compared to thermoplastics due to their crosslinked structure formed during the curing process. This structure provides enhanced mechanical properties, making thermosetting plastics more suitable for demanding applications, such as aerospace components and high-stress machinery parts, where strength is crucial.

5. Which plastic is typically more flexible?

- a) Thermosetting plastics
- b) Composite plastics
- c) Thermoplastics
- d) None of the above

Correct Answer: c) Thermoplastics

Explanation: Thermoplastics are typically more flexible than thermosetting plastics because they can be easily molded and reshaped when heated. This flexibility allows them to be used in a wide variety of applications, from packaging materials to consumer products, where adaptability and ease of processing are important.

6. What type of plastic is used for electrical insulation?

- a) Biodegradable plastics
- b) Thermoplastics
- c) None of the above
- d) Thermosetting plastics

Correct Answer: d) Thermosetting plastics

9. What is the characteristic of thermoplastics when heated?

- a) They melt
- b) They break
- c) They harden
- d) They shatter

Correct Answer: a) They melt

Explanation: When heated, thermoplastics soften and can be melted, allowing them to be reshaped into different forms. This property is vital for processes like injection molding and extrusion, where the material is heated, shaped, and then cooled to solidify into the desired product, enabling versatile applications in manufacturing.

10. What does the term "crosslinking" refer to?

- a) Polymer bonding
- b) Strength reduction
- c) Material flexibility
- d) Temperature increase

Correct Answer: a) Polymer bonding

Explanation: Crosslinking refers to the bonding of polymer chains in thermosetting plastics, which enhances their strength, heat resistance, and durability. This process creates a three-dimensional network structure that holds the material in a permanent shape, making it ideal for heavy-duty applications where stability and resistance to heat are essential.

11. Which thermoplastic is known for its toughness?

- a) PVC
- b) Polystyrene
- c) Polycarbonate
- d) Polypropylene

Correct Answer: c) Polycarbonate

Explanation: Polycarbonate is a thermoplastic known for its exceptional toughness and impact resistance.
