This practice is critical in railway signaling systems, ensuring that any fault currents are safely dissipated. Proper grounding helps protect both personnel and sensitive electronic equipment from damage.

12. What do signal relays control?

- a) Circuit resistance
- b) Energy storage
- c) Signal lights
- d) Battery charge

Correct Answer: c) Signal lights

Explanation: Signal relays are designed to control the operation of signal lights in railway systems. By opening or closing circuits based on input signals, relays ensure that the appropriate lights are activated or deactivated, conveying critical information to train operators. This function is essential for maintaining safety and efficiency in railway operations.

13. Which resistor type is commonly used?

- a) Super
- b) Variable
- c) Non-linear
- d) Inductor

Correct Answer: b) Variable

Explanation: A variable resistor, also known as a potentiometer, is commonly used in various applications, including railway signaling. It allows for adjusting resistance levels, which can control current flow and signal brightness. Understanding how to use variable resistors is important for technicians to fine-tune signaling devices.

14. What does a diode do?

- a) Restrict voltage
- b) Measure resistance
- c) Store current
- d) Allow current flow

Correct Answer: d) Allow current flow

Explanation: A diode is a semiconductor device that allows electrical current to flow in one direction only. This characteristic is useful for protecting circuits from reverse polarity and ensuring that signals function correctly. In railway signaling, diodes can be used in various applications, including signal light control and rectifying AC to DC.

15. What is a common use of capacitors?

- a) Increasing resistance
- b) Measuring voltage
- c) Storing energy
- d) Smoothing signals

Correct Answer: d) Smoothing signals

Explanation: Capacitors are commonly used in electrical circuits to smooth out voltage fluctuations and stabilize signals. They help filter out noise and provide a consistent power supply to devices, including railway signals. This function is vital for ensuring reliable signal operation in varying electrical conditions.

16. What does a circuit breaker do?

- a) Boost voltage
- b) Fuse circuits
- c) Cut off current
- d) Measure resistance

Correct Answer: c) Cut off current
