Regular inspections and maintenance of tools are essential practices that contribute to overall safety and efficiency in oil field operations.

13. What color is a fire extinguisher for flammable liquids?

- a) Green
- b) Yellow
- c) Blue
- d) Red

Correct Answer: d) Red

Explanation: Fire extinguishers for flammable liquids are typically red in color, making them easily identifiable. These extinguishers contain specific agents designed to combat fires caused by flammable liquids, such as oil and gasoline. Knowing the proper type of fire extinguisher to use in different situations is vital for effective fire response on oil rigs.

14. What is a blowout preventer?

- a) A pressure control device
- b) A fire alarm
- c) A tool for drilling
- d) A safety valve

Correct Answer: a) A pressure control device

Explanation: A blowout preventer (BOP) is a critical safety device used on oil rigs to control pressure during drilling operations. It prevents the uncontrolled release of oil or gas from the well, which can lead to blowouts and dangerous situations. Understanding the function and operation of BOPs is essential for maintaining safety in oil field mechanics.

15. What is the safest way to handle flammable materials?

- a) Keep away from ignition sources
