- b) Filters debris
- c) Cools the system
- d) Transfers force

Correct Answer: d) Transfers force

Explanation: Hydraulic fluid is essential in hydraulic systems, as it transfers force from one part of the system to another. This allows the crane's hydraulic cylinders to operate effectively, enabling the lifting and lowering of loads. Proper maintenance of hydraulic fluid is critical to ensure efficient operation and prevent system failures.

2. What is a common crane safety feature?

- a) Emergency lights
- b) Load limit switch
- c) Color-coded cables
- d) Manual override

Correct Answer: b) Load limit switch

Explanation: A load limit switch is a crucial safety feature in tower cranes. It prevents the crane from lifting loads that exceed its capacity, thereby protecting both the crane and the operator from potential accidents. Regular testing and maintenance of this safety feature are essential to ensure its reliability during operations.

3. What signals crane operator's alerts?

- a) Worker shouting
- b) Horns and lights
- c) Hand signals only
- d) Radio chatter

Correct Answer: b) Horns and lights

Correct Answer: c) All of the above

Explanation: Crane tipping can occur due to several factors, including uneven ground, high winds, and overloading. Each of these conditions can destabilize the crane, leading to potential accidents. Operators must assess site conditions and adhere to load limits to prevent tipping and ensure safe crane operation at all times.

12. What is a common hydraulic component failure?

- a) Filter clogging
- b) Cylinder leaks
- c) All of the above
- d) Hose fraying

Correct Answer: c) All of the above

Explanation: Hydraulic component failures can arise from cylinder leaks, hose fraying, and filter clogging. Each of these issues can compromise the hydraulic system's efficiency and safety. Regular maintenance and inspections are necessary to identify and rectify these problems before they escalate, ensuring smooth crane operations.

13. What does a limit switch prevent?

- a) Overheating
- b) Underloading
- c) All of the above
- d) Overlifting

Correct Answer: d) Overlifting

Explanation: A limit switch is designed to prevent overlifting by stopping the crane's operation when a predetermined height is reached. This safety feature protects both the crane and the load from potential damage. Regular testing of limit switches is essential to ensure they function correctly and maintain safe lifting practices.

14. What is the purpose of anti-two block system?

- a) Stops cable damage
- b) Avoids overloading
- c) Prevents load swings
- d) Enhances speed

Correct Answer: a) Stops cable damage

Explanation: The anti-two block system prevents cable damage by ensuring that the hook does not come into contact with the crane's boom. This safety mechanism protects the crane's rigging and extends the life of the cables. Operators must be trained to recognize when this system is engaged to avoid damage during operations.

15. What could indicate pump failure?

- a) All of the above
- b) Low pressure
- c) Unusual noises
- d) Vibration increase

Correct Answer: a) All of the above

Explanation: Unusual noises, increased vibration, and low pressure can all indicate pump failure in the hydraulic system of a tower crane. These symptoms signal that the pump may not be functioning correctly, which could lead to operational issues. Operators should investigate these signs promptly to prevent further damage and ensure safe crane operation.

16. What is a common electrical issue in cranes?

- a) Wiring damage
- b) All of the above
- c) Rusty contacts
- d) Blown fuses

Correct Answer: b) All of the above

Explanation: Common electrical issues in cranes include blown fuses, rusty contacts, and wiring damage. Each of these problems can disrupt the electrical systems that control the crane's functions. Regular inspections and maintenance are vital to identify and rectify these issues, ensuring safe and efficient crane operation on-site.

17. What does a hydraulic filter do?

- a) Filters contaminants
- b) Cools fluid
- c) Increases pressure
